Docket No.: DTR112

## AMENDMENTS TO THE CLAIMS

## Listing of claims:

Claim 1 (Canceled herein)

Claim 2 (Canceled herein)

## 3. A method as claimed in claim 1, A method, comprising:

executing an electronic hybridization assay on a first sequence and a reference sequence, the first sequence representing at least one or more subunits of a first molecule and the reference sequence representing at least one or more subunits of a second molecule;

providing an output representative of a hybridization reaction between the first and second molecules; and

further comprising the step of encoding the first sequence so that said executing step is optimized, wherein the first sequence includes at least one positive value and at least one negative value.

- 4. A method as claimed in claim 4 3, said executing step including the step of performing a correlation algorithm on the first sequence and the reference sequence, the output of said providing step including a correlation output.
- 5. A method as claimed in claim 1 3, further including the step of identifying a first molecule based upon the output of said providing step.
- 6. A method as claimed in claim + 3, further including the step of identifying a position of sequence similarity between the first molecule and the second molecule.
  - 7. (Amended herein) An apparatus, comprising:

means for executing an electronic hybridization assay on the a first sequence and a reference sequence, the first sequence representing at least one or more subunits of a

first-molecule and the reference-sequence-representing-at-least-one-or more-subunits-of-a-

second molecule; and

means for providing an output representative of a hybridization reaction between

the first and second molecules; and

means for encoding the first sequence so that execution by said executing means

is optimized, wherein the first sequence includes at least one positive value and at least

one negative value.

8. An apparatus as claimed in claim 7, said executing means comprising an

electronic hybridization machine.

9. An apparatus as claimed in claim 7, said executing means comprising a

computer appliance structure.

10. An apparatus as claimed in claim 7, said executing means comprising a

digital signal processor structure.

11. An apparatus as claimed in claim 7, said executing means comprising a

hardware correlator device structure.

12. An apparatus as claimed in claim 7, further comprising means for encoding

the first sequence so that execution by said executing means is optimized.

Claim 13. (Canceled herein)

14. An apparatus as claimed in claim 7, said executing means including means

for performing a correlation algorithm on the first sequence and the reference sequence,

the output of said providing means including a correlation output.

15. An apparatus as claimed in claim 7, further including means for identifying

the first molecule based upon the output of said providing means.

Docket No.: DTR112

An apparatus as claimed in claim 7, further including the means for 16. identifying a position of sequence similarity between the first molecule and the second

molecule.

(Amended herein) A machine readable medium having a program of

instructions stored thereon, the program of instructions for causing a machine to

implement steps for executing an electronic hybridization assay according to the program

of instructions, the steps comprising:

executing an electronic hybridization assay on a first sequence and a reference

sequence, the first sequence representing at least one or more subunits of a first molecule

and the reference sequence representing at least one or more subunits of a second

molecule: and

providing an output representative of a hybridization reaction between the first

and second molecules; and

encoding the first sequence so that said executing step is optimized, wherein the

first sequence includes at least one positive value and at least one negative value.

18. A machine readable medium as claimed in claim 17, further comprising the

step of encoding the first sequence so that said executing step is optimized.

Claim 19. (Canceled herein)

20. A machine readable medium as claimed in claim 17, the executing step

including the step of performing a correlation algorithm on the first sequence and the

reference sequence, the output of said providing step including a correlation output.

Claims 21-30 (Canceled herein)
